MODUL 3

Local Variabel. Latihan 1

Nilai dari variable umur **tidak dapat** dipanggil dari method void beratBadan(), karena variable umur merupakan variable local, yang hanya dapat diakses dalam methodnya sendiri.

Instance Variable. Latihan 2

Static Variable

```
5
6
      package modul3;
7
   - /**
8
9
       * @author LABRPL-3
10
11
12
      public class StaticVariable {
13
         public static char akreditasi;
<u>Q.</u>
          public static final String jurusan = "Informatika";
15
16
   void firstMethod() {
17
              System.out.println(jurusan);
18
19
20
   void secondMethod() {
              System.out.println("Akreditasi : " + akreditasi );
21
22
23
     }
24
```

```

Method Non-Void

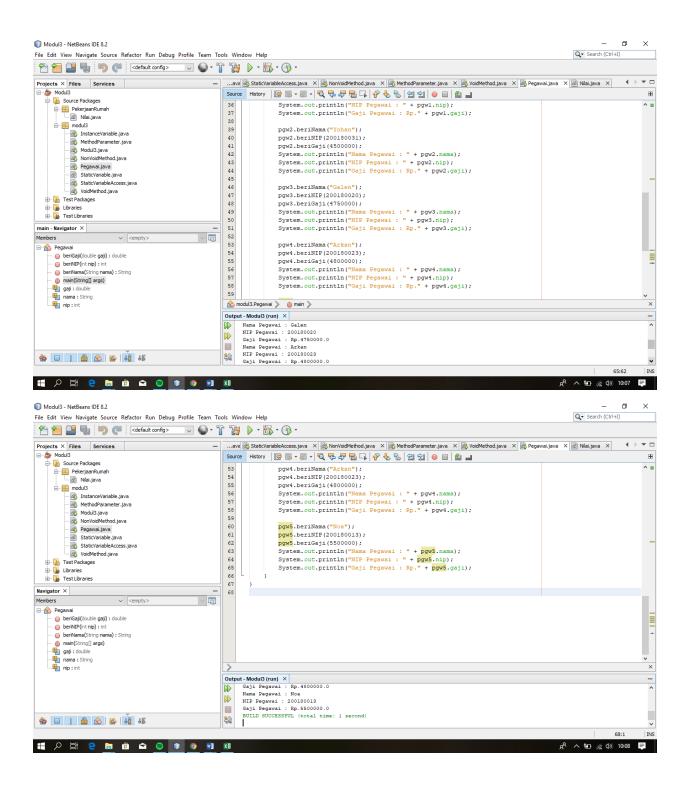

Parameter Method

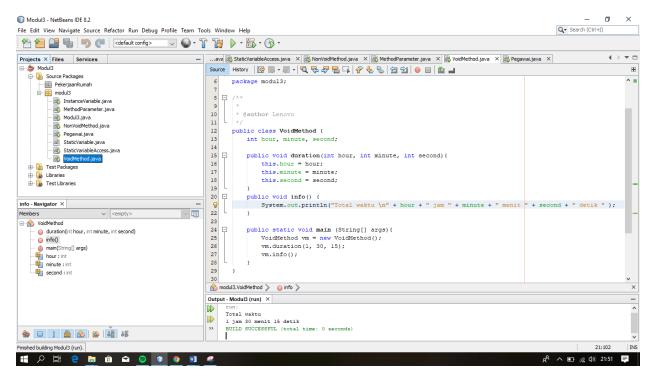

Latihan 3

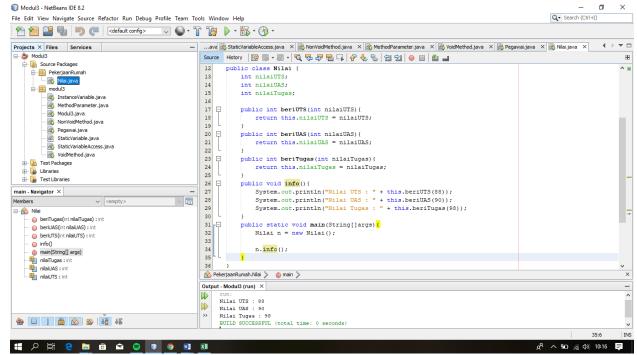

Method Void

Pekerjaan Rumah

1. Melengkapi kode pada Program 10 dengan menambahkan method void dan method return, yang mengembalikan nilai dari setiap parameter method void.

2. Mengubah tipe data int menjadi double dan menambahkan variable double nilaiTotal, kemudian menghitung nilaiTotal dengan rumus.
